

TRANSFORMING NIGERIA'S PAST INTO TOMORROW'S SMART CITIES.

ABOUT US

The Capital Infrastructure Group (CIG) is a multidisciplinary project delivery consortium established by Global Africa Investments Ltd. We lead the regeneration of Nigerian cities and the development of new smart urban environments, from central business districts to future-ready innovation hubs.

CIG was created to bridge the gap between visionary planning and practical execution. We combine technical expertise, legal and regulatory structuring, and professional oversight in one integrated platform that delivers infrastructure projects at scale.

Working with government and accredited professional bodies, we ensure every project is feasible, buildable, and aligned with national priorities. Our mission is clear: to turn urban vision into structured, accountable delivery that transforms how Nigerian cities grow and function

VISION

To be the leading platform for integrated urban transformation and capital infrastructure delivery in Nigeria. CIG is committed to driving the regeneration of existing cities and the development of new central business districts, smart cities, and innovation hubs. Our goal is to shape urban environments that are inclusive, resilient, and globally competitive through coordinated planning, design excellence, and dependable execution.

AIM

To close the persistent gap between planning and implementation in Nigeria's urban development landscape. CIG brings together technical expertise, institutional coordination, and project oversight to turn vision into reality. Our aim is to offer a structured, professional-led platform that enables governments and stakeholders to successfully deliver transformative infrastructure projects that modernise cities and unlock long-term economic value.

CONCLUSION

CIG seeks to provide full-spectrum infrastructure delivery that covers design, planning, legal structuring, engineering, and construction within one integrated system. We aim to transform existing city centres and business districts into more efficient, liveable, and commercially vibrant zones, while also planning and building entirely new urban areas equipped with sustainable, technology-enabled infrastructure.

Our approach ensures that all projects are grounded in professional input, aligned with regulatory standards, and implemented in close coordination with government agencies, institutions, and local communities. By doing so, we are establishing a national model for urban development that is transparent, scalable, and fit for the challenges of a rapidly evolving country
